From the very start, Hibbing Fabricators, Inc. has been committed to quality in all facets of our business. We define "Quality" as meeting or exceeding our customer's expectations through the products and services we provide and the value we add as a trusted Partner. We recognize that commitment to the ISO and AS standards provides a framework for our continuing quality efforts and a system to ensure on-going improvement in all business aspects to the betterment of ourselves and those we serve.

Hibbing Fabricators has put several processes in place to support our customers and the certifications and quality standards to which we perform. One of those processes was the construction of an inspection room centralized on our production floor. The **temperature controlled room houses inspection tables, a Faro Arm portable CMM, InspecVision 2D part scanner, height gauges, calipers, micrometers and pin gauges.**
